Hydrobiologia **393:** v–vii, 1999.
E.M. Blomqvist, E. Bonsdorff & K. Essink (eds), Biological, Physical and Geochemical Features of Enclosed and Semi-enclosed Marine Systems.

Contents

Preface ix

List of Participants ..... xi–xiii

Hydrography and Modelling

The influence of river runoff on deep water conditions in the Baltic Sea
by W. Matthäus & H. Schinke 1–10
Water exchange as the main physical process in semi-enclosed marine systems: the Gulf of Riga case
by V. Astok, M. Otsmann & Ü. Suursaar. 11–18
Modelling of dispersion processes in a tide-forced flow
by G. Buffoni, A. Griffa & E. Zambianchi 19–24
Interannual and regional variability of biological variables in a coupled 3-D model of the western Baltic
by K. Fennel 25–33
Modelling regional and large-scale response of Baltic Sea ecosystems to nutrient load reductions
by O. Savchuk & F. Wulff 35–43
An integrated biogeochemical model system for the Baltic Sea
by E. Marmefelt, B. Arheimer & J. Langner 45–56

Eutrophication-Related Studies

Phytoplankton and nutrient dynamics in the north-east Irish Sea
by K. Kennington, J.R. Allen, A. Wither, T.M. Shammon & R.G. Hartnoll 57–67
Response to lowered nutrient discharges in the coastal waters around the island of Funen, Denmark
by N. Rask, S.E. Pedersen & M.H. Jensen 69–81
Seasonal succession and growth in the plankton communities of the Gulf of Riga in relation to long-term nutrient dynamics
by A. Yurkovskis, E. Kostrichkina & A. Ikauniece 83–94
Response of aquatic communities to anthropogenic stress: a comparative study of Neva Bay and the eastern Gulf of Finland
by I.V. Telesh, A.F. Alimov, S.M. Golubkov, V.N. Nikulina & V.E. Panov 95–105
Denitrification in estuarine sediments in the eastern Gulf of Finland, Baltic Sea
by V. Gran & H. Pitkänen 107–115

Seasonal changes in sedimentary microbial communities of two eutrophic bays as estimated by biomarkers
by N. Rajendran & Y. Nagatomo 117–125

Studies of Gradients

Sedimentation and particulate nutrient dynamics along a coastal gradient from a fjord-like bay to the open sea
by A.-S. Heiskanen & P. Tallberg 127–140
Phytoplankton and bacterioplankton production and bacterial biomass in a fjord-like bay – open sea gradient
by P. Tuomi, K. Suominen & R. Autio 141–150
Heterotrophic nanoflagellates and bacteria in sediment of a brackish water sill basin in the Baltic Sea
by J. Ekebom 151–161
Identification of small-scale structure of plankton communities of the Black and Ionian Seas by their bioluminescence characteristics
by Yu.N. Tokarev, R. Williams & S.A. Piontkovski 163–167

Benthic Communities

The benthic algal vegetation of land-locked fjords in southeastern Iceland
by I.M. Munda 169–180
Distribution of phytobenthos biomass in the Gulf of Riga (1984–1991)
by G. Martin 181–190
Structure of phytobenthic and associated animal communities in the Gulf of Riga
by H. Kautsky, G. Martin, A. Mäkinen, M. Borgiel, P. Vahteri & J. Rissanen 191–200
Growth and production of three macrozoobenthic species in the Gulf of Riga, including comparisons with other areas
by H. Cederwall & V. Jermakovs 201–210
A photographic study of the recolonization of cleared patches in a dense population of *Mytilus edulis* in the northern Baltic proper
by B. Littorin & M. Gilek 211–219
Structure of communities associated with dense assemblages of the tube-dwelling polychaete *Polydora quadrilobata* Jacobi (Spionidae) in the White Sea
by V.M. Khaitov, M.V. Fokin & A.M. Nicolaeva 221–226

Introduced Species

Distribution and seasonal dynamics of the Ponto-Caspian invader *Cercopagis pengoi* (Crustacea, Cladocera) in the Neva Estuary (Gulf of Finland)
by P.I. Krylov, D.E. Bychenkov, V.E. Panov, N.V. Rodionova & I.V. Telesh 227–232

Non-native animals in the Baltic Sea: alteration of benthic habitats in coastal inlets and lagoons
by S. Olenin & E. Leppäkoski 233–243

Case Studies of Environmental Impact

Red tide of the dinoflagellate *Heterocapsa triquetra* (Dinophyta) in a ferry-mixed coastal inlet
by T. Lindholm & C. Nummelin 245–251
Littoral fish communities in the Archipelago Sea, SW Finland: a preliminary study of changes over 20 years
by M. Rajasilta, J. Mankki, K. Ranta-Aho & I. Vuorinen 253–260
Heavy metal uptake, physiological response and survival of the blue mussel (*Mytilus edulis*) from marine and brackish waters in relation to the induction of heat-shock protein 70
by M. Tedengren, B. Olsson, B. Bradley & L. Zhou 261–269
Selection of southern Baltic banks – future marine protection areas
by E. Andrulewicz & M. Wielgat 271–277

Society Information

Baltic Marine Biologists (BMB) 279
The Estuarine and Coastal Sciences Association (ECSA) 280
